

Romanesco

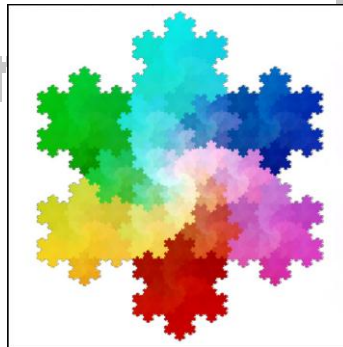

The Fractal Food

What is a fractal?

A fractal is a shape that can be split into parts.

Each part is a smaller copy of the whole.

Each part of a Romanesco is exactly alike when it is whole or in fractions of itself! Another example of a fractal is a snowflake. If a whole snowflake breaks apart, there will be several smaller identical snowflakes floating around!

The Romanesco is from Italy. It is a cross between cauliflower and broccoli. Italians call it Broccoli Romanesco. The French call it Cauliflower Romanesco.

Does it taste more like cauliflower or broccoli?

You be the judge!
